In number theory, integer factorization is the decomposition of a composite number into a product of smaller integers. If these integers are further restricted to prime numbers, the process is called prime factorization.. When the numbers are sufficiently large, no efficient, non-quantum integer factorization algorithm is known. An effort by several researchers, concluded in 2009, to factor a ...

A trapdoor function is a function that is easy to compute in one direction, yet difficult to compute in the opposite direction (finding its inverse) without special information, called the "trapdoor". Trapdoor functions are widely used in cryptography.. In mathematical terms, if f is a trapdoor function, then there exists some secret information y , such that given $f(x)$ and y , it is easy to ...

Unhackable Cryptography? A recent article overhyped the release of EverCrypt, a cryptography library created using formal methods to prove security against specific attacks.. The Quanta magazine article sets off a series of "snake-oil" alarm bells. The author's Github README is more measured and accurate, and illustrates what a cool project this really is.
