Lab Activity on Global Wind Patterns D-65 Lab Activity #2: The Coriolis Effect on a Flat Spinning Earth Introduction In this activity, we begin to study the Coriolis effect, the effect that Earth's rotation has on the motion (from the viewpoint of an observer on Earth) of flying objects, including air molecules. Materials: spinning lab stool

### **Lab Activity on Global Wind Patterns - CSU, Chico**

This lesson uses a variety of strategies to assist students with understanding the role the Sun plays in the formation of global winds and helps students understand how the Earth's rotation affects these global winds.

### **Global winds and the Coriolis Effect - CPALMS.org**

The Coriolis Effect The Coriolis effect is the name given to the phenomenon that objects (including air masses and wind) moving in a straight path on an object rotating at a constant speed appear to be deflected to one side of their path when viewed from the frame of reference of the rotating

object, due to differences in relative velocity and the turning of the frame of reference.
