Coulomb's Law Equation. The quantitative expression for the effect of these three variables on electric force is known as Coulomb's law. Coulomb's law states that the electrical force between two charged objects is directly proportional to the product of the quantity of charge on the objects and inversely proportional to the square of the separation distance between the two objects.

Dipole Moment ( $\mu$ ) between two charges separated by distance  $d$  is  $\mu = q \times d$ . Historically the debye was defined as the dipole moment resulting from two charges of opposite sign but an equal magnitude of  $10^{-10}$  statcoulomb (generally called e.s.u. (electrostatic unit) in older literature), which were separated by 1 ångström ( $= 10^{-8}$  "cm") ...
