Protein Synthesis Worksheet Answer Key Part B Unique ...

Translation (biology) In molecular biology and genetics, translation is the process in which ribosomes in the cytoplasm or ER synthesize proteins after the process of transcription of DNA to RNA in the cell's nucleus. The entire process is called gene expression . In translation, messenger RNA...

Translation (biology) - Wikipedia

Transcription takes place in the nucleus. Transcription is like writing a message because it is copied from DNA's information. mRNA goes to the cytoplasm after it has been copied. The teacher should show video segment (5:33 - end) then discuss the translation process with students using the notetaking sheet.

Ok, so everyone knows that DNA is the genetic code, but what does that mean? How can some little molecule be a code that makes a single cell develop into a giraffe, or a monkey, or Tony Danza ...

Transcription and Translation: From DNA to Protein

RNA, Ribonucleic Acid is very similar to DNA. RNA normally exists as a single strand (and not the double stranded double helix of DNA). It contains the same bases, adenine, guanine and cytosine. However, there is no thymine found in RNA, instead there is a similar compound called uracil. Transcription is the process by which RNA is made from DNA.
