In the conceptual model of fundamental interactions, matter consists of fermions, which carry properties called charges and spin $\pm 1/2$ (intrinsic angular momentum $\pm \hbar/2$, where \hbar is the reduced Planck constant). They attract or repel each other by exchanging bosons.. The interaction of any pair of fermions in perturbation theory can then be modelled thus:

As mentioned in a previous section of Lesson 4, two or more electrical devices in a circuit can be connected by series connections or by parallel connections. When all the devices are connected using parallel connections, the circuit is referred to as a parallel circuit. In a parallel circuit, each device is placed in its own separate branch. The presence of branch lines means that there are ...

makes it clear that the deformation is proportional to the applied force. shows the Hooke's law relationship between the extension of a spring or of a human bone. For Bones are brittle and the elastic region is small and the fracture abrupt. Eventually a large enough stress to the material will cause it to break or fracture. Tensile strength is the breaking stress that will cause permanent ...

The previous part of Lesson 2 discussed the relationship between work and energy change. Whenever work is done upon an object by an external force, there will be a change in the total mechanical energy of the object. If only internal forces are doing work (no work done by external forces), there is no change in total mechanical energy; the total mechanical energy is said to be conserved.
