A complex number is a number that can be expressed in the form $a + bi$, where a and b are real numbers, and i is a solution of the equation $x^2 = -1$. Because no real number satisfies this equation, i is called an imaginary number. For the complex number $a + bi$, a is called the real part, and b is called the imaginary part. Despite the historical nomenclature "imaginary", complex numbers are ...

where the s are integers (or equivalently, rational numbers) and satisfies no similar equation of degree s , then α is said to be an algebraic number of degree s . A number that is not algebraic is said to be transcendental. If α is an algebraic number and n is an integer, then $n\alpha$ is called an algebraic integer. In general, algebraic numbers are complex, but they may also be real.
