Sample answer. If the diameter of circle A has the same length as the radius of circle B , then one circle can be transformed, using only translations and rotations, so the diameter of circle A coincides with the radius of circle B. Translations and rotations are rigid motions, so the two segments are congruent.

### Answers to Geometry Unit 2 Practice

Geometry Unit 2 Test Review Answer KEY. 1. Converse: If two angles are congruent, then they are vertical. Inverse: If two angles are not congruent, then they are not vertical. Contrapositive: If two angles are not vertical, then they are not congruent. 2. Converse: If figures have proportional side lengths, then they are similar.
