The best simple and qualitative explanation I've heard about this is to imagine that we are always traveling through space-time at the speed of light, c . That is, motion through both space and time has to add up to that number, so motion through space slows down your motion through time, and vice versa.

Resistors in Series. When are resistors in series? Resistors are in series whenever the flow of charge, called the current, must flow through devices sequentially. For example, if current flows through a person holding a screwdriver and into the Earth, then in (a) could be the resistance of the screwdriver's shaft, the resistance of its handle, the person's body resistance, and the ...

In Unit 2 we studied the use of Newton's second law and free-body diagrams to determine the net force and acceleration of objects. In that unit, the forces acting upon objects were always directed in one dimension. There may have been both horizontal and vertical forces acting upon objects; yet there were never individual forces that were directed both horizontally and vertically.
