DNA sequencing is the process of determining the nucleic acid sequence – the order of nucleotides in DNA. It includes any method or technology that is used to determine the order of the four bases: adenine, guanine, cytosine, and thymine. The advent of rapid DNA sequencing methods has greatly accelerated biological and medical research and discovery.

1. Introduction. Risk assessment models today play an increasing role in data protection, as recently confirmed by the EU General Data Protection Regulation (hereinafter GDPR). 1 Various types of assessment models can be adopted: they may be mandatory or voluntary, self-assessments or third-party/licensing schemes. They can only assess specific kinds of data processing or types of risk.
