We call sound that is reflected back to us echoes. Many animals use echolocation to see through dark water or at night! An animal makes a noise and uses the echo to figure out where an object or prey is located. Humans use echolocation, too, in sonar (submarines using sound waves), radar (airports using light waves), and sonograms

Part f of number 3 is asking for "speeds" which only refers to the magnitude of the speeds. There shouldn't be any negative answers. Remember sound travels at different speeds through different materials. Sound in water for example does not travel at the same speed as water in air. Other than that, I'll just remind you an important hint.
