What an awesome problem! There are many empirical formulas out there that will give you a length... but I've had a lot of feedback that this equation gives vastly better results than other formulas out there. I guess I'm not surprised: It's based on science and not empiricisms so read on for the perfect pour.

Explain what is Standard Deviation, Skewness and Kurtosis. Answer is kinda extra, because it was tough to find. Standard Deviation: a quantity expressing by how much the members of a group differ from the mean value for the group. The Standard Deviation is a more accurate and detailed estimate of dispersion because an outlier can greatly exaggerate the range (as was true in this example where ...

Most people with a degree in CS will certainly know what Big O stands for. It helps us to measure how (in)efficient an algorithm really is and if you know in what category the problem you are trying to solve lays in you can figure out if it is still possible to squeeze out that little extra performance. 1. But I'm curious, how do you calculate or approximate the complexity of your algorithms?

algorithm - Big O, how do you calculate/approximate it ...

We can also calculate the correlation between more than two variables. Definition 1: Given variables x , y and z , we define the multiple correlation coefficient. where r_{xz} , r_{yz} , r_{xy} are as defined in Definition 2 of Basic Concepts of Correlation. Here x and y are viewed as the independent variables and z is the dependent variable.. We also define the multiple coefficient of determination to ...

Whenever possible, repeat a measurement several times and average the results. This average is generally the best estimate of the "true" value (unless the data set is skewed by one or more outliers which should be examined to determine if they are bad data points that should be omitted from the average or valid measurements that require further investigation).
