Genetic inheritance is a basic principle of genetics and explains how characteristics are passed from one generation to the next. Genetic inheritance occurs due to genetic material in the form of DNA being passed from parents to their offspring. When organisms reproduce, all the information for growth, survival, and reproduction for the next generation is found in the DNA passed down from the ...

Inheritance Patterns – the ways in which genotypes pass among individuals and generations. Many inherited traits are either autosomal or Xlinked and either dominant or recessive. Such inheritance patterns reflect statistical calculations assessing the mathematical likelihood of certain traits or mutations passing from one generation to the next.
