Sound waves. The phenomenon of sound is easily found to have all the characteristics we expect from a wave phenomenon: Sound waves obey superposition. Sounds do not knock other sounds out of the way when they collide, and we can hear more than one sound at once if they both reach our ear simultaneously. The medium does not move with the sound.

Learning Objectives. While pure constructive and pure destructive interference do occur, they require precisely aligned identical waves. The superposition of most waves produces a combination of constructive and destructive interference and can vary from place to place and time to time. Sound from a stereo, for example,...
