Nine questions in a three-hour closed-book exam would be typical for this course at MIT. We try to cover all the way from $Ax=0$ (the null space and the special solutions) to projections, determinants, eigenvalues, and even a touch of singular values from the eigenvalues of $A^T A$. That is the good matrix of linear algebra: square, symmetric, and positive definite or at least semidefinite.

a feel for the subject, discuss how linear algebra comes in, point to some further reading, and give a few exercises. I have kept the exposition lively and given an overall sense of breadth of application. In short, these topics invite readers to see for themselves that linear algebra is a tool that a professional must have.
