The following diagram illustrates how this would work for the array  $\langle 1, 1, 1, 0, 1, 1, 0, 1 \rangle$  on four processors. (A completely different approach to this problem — still using the parallel scan algorithm we've studied — is to change each 0 in the array to be its index within the array, while we change each 1 to be the array's length.

A system administrator, or sysadmin, is a person who is responsible for the upkeep, configuration, and reliable operation of computer systems; especially multi-user computers, such as servers. The system administrator seeks to ensure that the uptime, performance, resources, and security of the computers they manage meet the needs of the users, without exceeding a set budget when doing so.

Socialized medicine is a term used in the United States to describe and discuss systems of universal health care: medical and hospital care for all by means of government regulation of health care and subsidies derived from taxation. Because of historically negative associations with socialism in American culture, the term is usually used pejoratively in American political discourse.
