In materials science and fatigue, the Goodman relation is an equation used to quantify the interaction of mean and alternating stresses on the fatigue life of a material.. A Goodman diagram, sometimes called a Haigh diagram or a Haigh-Soderberg diagram, is a graph of (linear) mean stress vs. (linear) alternating stress, showing when the material fails at some given number of cycles.

Assuming that you need to size a control valve for a system that has been designed, but not yet built, or perhaps a system that is running, but it is not possible, or convenient, to get reliable pressure measurements near the control valve, the correct procedure for determining the pressure drop across a control valve at the flow rate for which you plan to perform a sizing calculation, is as ...
