Best Answer: The tension in the string is the sum of the forces from the masses, or $m_1g + m_2g$. The forces on m_2 are its weight m_2g pulling down, and m_1g pulling up. The difference accelerates the mass. The difference is the net force, $(m_2 - m_1)g$, the acceleration resulting from that force on m_2 is $a = f/m_2$...
