Discrete mathematics is the study of mathematical structures that are fundamentally discrete rather than continuous. In contrast to real numbers that have the property of varying "smoothly", the objects studied in discrete mathematics – such as integers, graphs, and statements in logic – do not vary smoothly in this way, but have distinct, separated values.

Maps. A discrete-time, affine dynamical system has the form of a matrix difference equation: $x_{n+1} = Ax_n + b$, with A a matrix and b a vector. As in the continuous case, the change of coordinates $x \rightarrow x + (I - A)^{-1}b$ removes the term b from the equation. In the new coordinate system, the origin is a fixed point of the map and the solutions are of the linear system $A^n x_0$.
