DNA/RNA/Protein Synthesis Pre-Test

Best Answer: A. mRNA that is complementary would match up. A pairs with U and G pairs with C (in RNA T is represented by U instead). So that means in the DNA strand where there is a T, the RNA strand will have a U. The first three of the mRNA would be: AUG B. The anticodon of the tRNA will be complementary ...

Dna Rna And Protein Synthesis Chapter Test A Answer Key

RNA and Protein Synthesis Answer Key. The codon molecule is a piece of mRNA that enters the nucleus and transcribes the sequence of nitrogen bases from the DNA strand. The DNA serves as the blueprint for the proteins that will be created through the process of protein synthesis. The mRNA then leaves the nucleus and travels to the ribosomes where other forms of RNA translate the code.
