1. AVL trees are well-balanced. In an AVL tree, the difference between the heights of two subtrees for every node is 0 or 1. The balance factor of a node is the height of its right subtree minus the height of its left subtree. A node is said to be balanced if its balance factor is -1, 0, or 1. A node is said to be left-heavy if its balance ...

While you are encouraged to work together on labs, each student should submit an individual notebook each week. Notebooks must be submitted in the associated D2L dropbox on Monday at 11:30pm the week after they are assigned. For example, 1-1 and 1-2 are assigned for the first week of class and are due on Monday the following week.
