A computer network is a digital telecommunications network which allows nodes to share resources. In computer networks, computing devices exchange data with each other using connections between nodes. These data links are established over cable media such as wires or optic cables, or wireless media such as Wi-Fi. Network computer devices that originate, route and terminate the data are called ...

MU-MIMO gives every compatible device 3 its own dedicated full-speed Wi-Fi connection, so that multiple devices can connect at the same time without slowing down the network. In fact, RT-AC85P is able to connect to multiple MU-MIMO-compatible clients at each device's maximum speed simultaneously, unlike standard single-user MIMO where individual devices have to wait for sequential transmissions..

1. Introduction. The 'science of networks' (Watts, 2007) has evolved significantly over the course of the last decade spurred by the popularity of online communication through social media technology. One group to fully embrace this new medium are young people, with some international data suggesting that 83% of those aged 18-29 years use social networking sites (Duggan & Brenner, 2013).
