In mathematics, an invariant is a property, held by a class of mathematical objects, which remains unchanged when transformations of a certain type are applied to the objects. The particular class of objects and type of transformations are usually indicated by the context in which the term is used. For example, the area of a triangle is an invariant with respect to isometries of the Euclidean ...

Building a "Pythagoras" Guitar Video. There is a lot of mathematics involved with building a guitar. The components need to be precisely measured and fitted to create a good "action" distance of the strings from the fretboard, as well as setting pickup distances, and getting the electronics connected correctly.

The mathematics of general relativity are complex. In Newton's theories of motion, an object's length and the rate at which time passes remain constant while the object accelerates, meaning that many problems in Newtonian mechanics may be solved by algebra alone. In relativity, however, an object's length and the rate at which time passes both change appreciably as the object's speed ...

Great stuff. Given this complexity, I'm wondering if you personally consume probiotic supplements. Larry Smarr has said that only 15% of our gut bacteria are aerobes, so the other 85% cannot be impacted by the supplements (I think he did recommend prebiotic foods, tho).

A characteristic of applying these transformations is that the order is important. If the rotation matrices above are called $R_x(t)$, $R_y(t)$, and $R_z(t)$ respectively then applying the rotations in the order $R_z(t) R_x(t) R_y(t)$ will in general result in a different result to another order, say $R_x(t) R_y(t) R_z(t)$. In what follows a particular order will be discussed and the other ...
