Conservation Of Mass And Answer

Conservation refers to a logical thinking ability that allows a person to determine that a certain quantity will remain the same despite adjustment of the container, shape, or apparent size, according to the psychologist Jean Piaget. His theory posits that this ability is not present in children during the preoperational stage of their development at ages 2-7 but develops in the concrete ...

Answer: The correct answer is Option A. Explanation: Law of Conservation of Mass states that mass can neither be formed nor be destroyed but can be transformed from one form to another. Every balanced equation follows this law. This law basically means that the total mass on the reactant side is always equal to the total mass on the product side.. For Example: The equation for the formation of ...

This formula states that the equivalent energy (E) can be calculated as the mass (m) multiplied by the speed of light ($c = \sim 3 \times 10^8$ m/s) squared. Similarly, anything having energy exhibits a corresponding mass m given by its energy E divided by the speed of light squared c^2 . Because the speed of light is a very large number in everyday units, the formula implies that even an everyday object ...

Momentum as a Vector Quantity. Momentum is a vector quantity. As discussed in an earlier unit, a vector quantity is a quantity that is fully described by both magnitude and direction. To fully describe the momentum of a 5-kg bowling ball moving westward at 2 m/s, you must include information about both the magnitude and the direction of the bowling ball.
