Flow velocity. The solution of the equations is a flow velocity. It is a vector field - to every point in a fluid, at any moment in a time interval, it gives a vector whose direction and magnitude are those of the velocity of the fluid at that point in space and at that moment in time. It is usually studied in three spatial dimensions and one time dimension, although the two (spatial ...

Mathematical Description Single waves. A wave can be described just like a field, namely as a function (\cdot) where \mathbf{x} is a position and t is a time. The value of \mathbf{x} is a point of space, specifically in the region where the wave is defined. In mathematical terms, it is usually a vector in the Cartesian three-dimensional space. However, in many cases one can ignore one or two dimensions, and let \mathbf{x} be a ...
