Earth system science aims to understand Earth as a system made up of interacting parts, or subsystems. A system can be any size group of interacting parts that form a complex whole. • In a closed system, matter does not enter or leave the system. • In an open system, energy and matter flow into and out of the system.

Chapter 1 Introduction to Earth Science

A large body of air with the same characteristics of temperature and moisture content is known as

an air mass. An air mass receives its characteristics from the location it forms, known as its source region. Fronts represent the advancing edge of the air mass at ground level. Only low pressure systems have fronts, due to air masses converging at the low pressure.

Practice Regent Exam Questions - Earth science

Hot volcanic gases escaping Earth's interior built up the original atmosphere. Over hundreds of thousandths of years the gases cooled, eventually reaching a temperature where clouds could release a toxic rainfall for thousandths of years. This is believed to be the source of half of the water in Earth's oceans today.
