Molecular Level of Genetics. Each of our DNA molecules contains the genetic codes, or genes, for the synthesis of many different kinds of proteins and for the regulation of other genes. In a sense, a DNA molecule contains a sequence of permanently stored blueprints or recipes that are used mostly by our cells to assemble proteins out of amino acids.

Biological Basis of Heredity: Molecular Level of Genetics

DNA Molecule. Deoxyribonucleic acid (DNA) is the primary chemical component of chromosomes and is the material of which genes are made. It is sometimes called the "molecule of heredity," because parents transmit copied portions of their own DNA to offspring during reproduction, and because they propagate their traits by doing so.

Heredity, Genes, and DNA. Likewise, all cells arise from preexisting cells, so the genetic material must be replicated and passed from parent to progeny cell at each cell division. How genetic information is replicated and transmitted from cell to cell and organism to organism thus represents a question that is central to all of biology.
