1.2 Mesh: finite element mesh generation. A finite element mesh of a model is a tessellation of its geometry by simple geometrical elements of various shapes (in Gmsh: lines, triangles, quadrangles, tetrahedra, prisms, hexahedra and pyramids), arranged in such a way that if two of them intersect, they do so along a face, an edge or a node, and never otherwise.

Among D-regions, the deep beams can be featured. As shown in Figure 1, due to its dimensions, deep beams are usually an entire D-region. According to American Concrete Institute (ACI), by its standard (ACI 318-14, 2014), deep beams are members in which span is lower than 4 times their height ($l \leq 4h$), or concentrated loads exist within a distance "2h" from the support's face.

Vacuum is space devoid of matter. The word stems from the Latin adjective vacuus for "vacant" or "void". An approximation to such vacuum is a region with a gaseous pressure much less than atmospheric pressure. Physicists often discuss ideal test results that would occur in a perfect vacuum, which they sometimes simply call "vacuum" or free space, and use the term partial vacuum to refer to an ...
