Another tricky thing about density is that you can't add densities. If I have a rock that is made up of two minerals, one with a density of 2.8 g/cm³, and one with a density of 3.5 g/cm³, the rock will have a density between 3.5 and 2.8 g/cm³, not a density of 6.3 g/cm³. This is because both the mass and the volume of the two minerals will be added, and so when they are divided to get the ...
