As Table 1 reveals, although there is no standard or commonly accepted definition of an energy transition in the recent academic literature, there is a common theme within them. An energy transition most broadly involves a change in an energy system, usually to a particular fuel source, technology, or prime mover (a device that converts energy into useful services, such as an automobile or ...

/u/mangoman51 describes why nuclear energy is the safest ...

Electricity is the set of physical phenomena associated with the presence and motion of matter that has a property of electric charge. In early days, electricity was considered as being not related to magnetism. Later on, many experimental results and the development of Maxwell's equations indicated that both electricity and magnetism are from a single phenomenon: electromagnetism.

Electricity - Wikipedia

One of the most controversial and pertinent topics of the 21st century is environmentalism. We argue about global warming, water supply, clean air, fossil fuels, sustainable agriculture, renewable energy, green buildings, waste removal and other issues crucial to our survival.

80% of our energy comes from burning fossil fuels, and that needs to change, fast. By the middle of this century we need to be approaching net zero carbon emissions, if the risk of major disruption from climate change is to be lowered – and the middle of this century is not very far away, when measured in terms of the lifetime of our energy infrastructure.

Discourse analysis offers a powerful toolbox for analysing political communication, but it also has its pitfalls. Aside from being very work-intensive, the idea that you only need to follow a certain number of steps to get your results can be misleading. A methodology is always only as good as your question. If your question does not lend itself to this sort of analysis, or if many of the steps I ...
