Interface. Interface is a pure abstract class.They are syntactically similar to classes, but you cannot create instance of an Interface and their methods are declared without any body. Interface is used to achieve complete abstraction in Java. When you create an interface it defines what a class can do without saying anything about how the class will do it.

Interfaces in Java | Core Java Tutorial | Studytonight

JSP is a server side technology that does all the processing at server. It is used for creating dynamic web applications, using java as programming language. Basically, any html file can be converted to JSP file by just changing the file extension from ".html" to ".jsp", it would run just fine.
