Cp Reflection And Refraction Practice As mentioned earlier, the Law of Plane Mirrors states that  $d_i = -d_o$ . This reflection, like ALL reflections, obeys the Law of Reflection: the angle of incidence equals the angle of reflection. Note that these angles are measured from the normal to either the

Reflection of waves off straight barriers follows the law of reflection. Reflection of waves off parabolic barriers results in the convergence of the waves at a focal point. Refraction is the change in direction of waves that occurs when waves travel from one medium to another. Refraction is always accompanied by a wavelength and speed change.

When light travels from one medium to another (like air to glass, or glass to water), it does three things. Some of it bounces off, some of it goes through, and the rest of it is absorbed. In this chapter, we will explore the first two. We will explore what rules govern them, their technical names and then apply these rules to study the beautiful world of curved mirrors and lenses.

Refraction of Light Rays at Interfaces. Light rays travel in different mediums at different speeds. In vacuum, for example, light travels at the speed of  $3 \times 10^8$  m/s. This is the highest speed possible in physics. One of the most important parameters that measures optical properties of a medium is the index of refraction.
