### **How do the digestive and endocrine systems work together?**

Blood Sugar Blood sugar levels are influenced by the digestive and endocrine systems. As the digestive system breaks down foods that are eaten, the sugar content in the foods causes the body's blood sugar level to rise. When blood sugar levels are low, the pancreas stimulates the release of glucagon to bring levels back up.

### **How do the digestive and endocrine systems work together?**

While the endocrine system is concerned with the production of hormones, the digestive system is involved with processing food. Although the two systems seem quite different, the gut is actually the largest of the body's endocrine organs, making the endocrine system and digestive system closely linked. Inside the intestines, ordinary gut cells are interspersed with individual endocrine cells ...
