Etymology. The term ray is somewhat of a misnomer due to a historical accident, as cosmic rays were at first, and wrongly, thought to be mostly electromagnetic radiation. In common scientific usage, high-energy particles with intrinsic mass are known as "cosmic" rays, while photons, which are quanta of electromagnetic radiation (and so have no intrinsic mass) are known by their common names ...

Ionizing radiation (ionising radiation) is radiation that carries enough energy to detach electrons from atoms or molecules, thereby ionizing them. Ionizing radiation is made up of energetic subatomic particles, ions or atoms moving at high speeds (usually greater than 1% of the speed of light), and electromagnetic waves on the high-energy end of the electromagnetic spectrum.

We can use non-spatial dimensions--time, color and perspective--to add dimension to otherwise static objects. For example, you may have seen an image on a 2-dimensional computer screen that appears 3-dimensional because of perspective. Using computer-generated perspective, architects can visually walk through a entire building's design before construction even begins see Figure 4.2 and Color Plate 22.

The Big Bang theory is science's best explanation of how the universe was created. The theory asserts that our entire universe was created when a tiny (billions of times smaller than a proton), super-dense, super-hot mass exploded and began expanding very rapidly, eventually cooling and forming into the stars and galaxies with which we are familiar.. This event is said to have happened ...
