Dna And Rna Test Answer

DNA is a long polymer made from repeating units called nucleotides. The structure of DNA is dynamic along its length, being capable of coiling into tight loops and other shapes. In all species it is composed of two helical chains, bound to each other by hydrogen bonds. Both chains are coiled around the same axis, and have the same pitch of 34 angstroms (Å) (3.4 nanometres).

DNA - Wikipedia

Deoxyribonucleic acid (DNA) is a molecule that contains the biological instructions that make each species unique. DNA, along with the instructions it contains, is passed from adult organisms to their offspring during reproduction.

HIV RNA / DNA PCR Test a.k.a Nucleic Acid Amplification Testing (NAAT) The HIV RNA test has revolutionized HIV screening especially for people at high risk. The test directly measures the amount of HIV virus in a person's blood. This same test is also used to monitor how a person with HIV is responding to treatment. When used this way, it is called a Viral Load test.

Formation. The replication cycle of a retrovirus entails the insertion ("integration") of a DNA copy of the viral genome into the nuclear genome of the host cell. Most retroviruses infect somatic cells, but occasional infection of germline cells (cells that produce eggs and sperm) can also occur. Rarely, retroviral integration may occur in a germline cell that goes on to develop into a viable ...

Endogenous retrovirus - Wikipedia

Polymerase chain reaction (PCR) is a technique that is used to amplify trace amounts of DNA (and in some instances, RNA) located in or on almost any liquid or surface where DNA strands may be deposited.
