A vertex v of a directed graph is said to be reachable from another vertex u when there exists a path that starts at u and ends at v.As a special case, every vertex is considered to be reachable from itself (by a path with zero edges). If a vertex can reach itself via a nontrivial path (a path with one or more edges), then that path is a cycle, so another way to define directed acyclic graphs ...

DNA stain PI is used to determine S-phase cell cycle fraction and DNA index as indicators of DNA ploidy. In POC this can help distinguish molar, partial mole, and non-molar pregnancies. Testing has diagnostic and prognostic value in some tumors.

x Sequencing cell-free DNA in maternal plasma is an effective noninvasive prenatal testing technique that has been used in fetal aneuploidy screening worldwide. However, its clinical application is limited by the low fetal fraction (<4%) of cell-free DNA in many singleton pregnancies, which usually results in screen failures or "no calls."

RNA silencing or RNA interference refers to a family of gene silencing effects by which gene expression is negatively regulated by non-coding RNAs such as microRNAs.RNA silencing may also be defined as sequence-specific regulation of gene expression triggered by double-stranded RNA (dsRNA). RNA silencing mechanisms are highly conserved in most eukaryotes.

The healing process is a dynamic circle that starts with injury and ends with recovery. This process becomes less efficient as we age (Gosain and Dipietro, 2004), and reciprocally, incomplete healing results in cell senescence and accelerated aging (Valentijn et al., 2018). Reductions in mitochondrial oxidative phosphorylation and altered mitochondrial structure are fundamental features of ...

To understand the spatiotemporal heterogeneity of microglia and other brain myeloid cells in an unbiased manner, we used a semi-automated Smart-seq2 platform to perform scRNA-seq on index-sorted innate immune cells from the mouse brain (Figure 1A). We sequenced a total of 1,922 cells to a depth of at least 1 million raw reads per cell, from embryonic day 14.5 (E14.5), postnatal day 7 (P7), and ...
