# **Density Problems With Answers**

Another tricky thing about density is that you can't add densities. If I have a rock that is made up of two minerals, one with a density of 2.8 g/cm 3, and one with a density of 3.5 g/cm 3, the rock will have a density between 3.5 and 2.8 g/cm 3, not a density of 6.3 g/cm 3. This is because both the mass and the volume of the two minerals will be added, and so when they are divided to get the ...

However, at least one study has indicated that people who follow a fasting diet may have better heart health than people who don't. This may be because people who routinely fast show self-control over how many calories they eat and drink, and this behavior may translate into weight control and better eating choices when they aren't fasting.

Definition. The kilogram is defined by taking the fixed numerical value of the Planck constant h to be 6.626 070 15  $\times$  10-34 when expressed in the unit J s, which is equal to kg m2 s -1, where the metre and the second are defined in terms of c and  $\Delta v$ . This was a new definition in May 2019.
