At meetings, in lessons, or just at home: IRISNotes™ 3 converts your writings into editable digital text. It recognises any writing (isolated characters and cursive handwritten text) and digitises it very reliably.

IRISNotes 3 - Digital Pen - IRISLINK.COM

A basic problem in imaging with x-rays (or other penetrating radiation) is that a two-dimensional image is obtained of a three-dimensional object.This means that structures can overlap in the final image, even though they are completely separate in the object. This is particularly troublesome in medical diagnosis where there are many anatomic structures that can interfere with what the ...

Computed Tomography - Digital signal processing

Digital Signal Processing is distinguished from other areas in computer science by the unique type of data it uses: signals.In most cases, these signals originate as sensory data from the real world: seismic vibrations, visual images, sound waves, etc. DSP is the mathematics, the algorithms, and the techniques used to manipulate these signals after they have been converted into a digital form.

The Roots of DSP - Digital signal processing

In computer graphics and digital imaging, image scaling refers to the resizing of a digital image. In video technology, the magnification of digital material is known as upscaling or resolution enhancement.. When scaling a vector graphic image, the graphic primitives that make up the image can be scaled using geometric transformations, with no loss of image quality.

Today's Question: A 105mm lens on a full frame camera in FX mode has the same field of view as a 70mm lens on the same camera in DX mode. However, images won't be the same. The 105mm lens image would have more apparent compression of distance than the 70mm lens because of the real difference in focal length, and at the same aperture, the 105mm lens would have a shallower depth of field ...
