Learning Python, 5th Edition - O'Reilly Media
When we introduced the type BookStore, we deliberately chose to give the type constructor BookStore a different name from the value constructor Book, purely to make it obvious which was which.. However, in Haskell, the names of types and values are independent of each other. We only use a type constructor (i.e. the type's name) in a type declaration or a type signature.

Chapter 3. Defining Types, Streamlining Functions
A database index is a data structure that improves the speed of data retrieval operations on a database table at the cost of additional writes and storage space to maintain the index data structure. Indexes are used to quickly locate data without having to search every row in a database table every time a database table is accessed. Indexes can be created using one or more columns of a ...
