Create a Shortcut to Lock Your Computer. Leaving your computer in a hurry but you don't want to log off? You can double-click a shortcut on your desktop to quickly lock the keyboard and display without using CTRL+ALT+DEL or a screen saver.

Create a Shortcut to Lock Your Computer

Shop locks for rental property, commercial building, industrial or office use RemoteLock smart locks solve the problem of remotely managing access for one to multiple properties. Provide an access code for guest or staff remotely that can expire when you set it. Order directly from RemoteLock by clicking on the locks below.

Shop RemoteLock Smart Locks | RemoteLock

Your new approach is much better than the previous one. Instead of deriving from List and using new to hide the base class implementations you create a wrapper around a List implementing IList - this is a much more robust way.. However there are a few oddities: You don't need to capture the result of a function call in a local variable to return it outside of the lock.

A lock is a flag associated with a table. MySQL allows a client session to explicitly acquire a table lock for preventing other sessions from accessing the same table during a specific period. A client session can acquire or release table locks only for itself. It cannot acquire or release table locks for other sessions.

MySQL Table Locking - MySQL Tutorial

needs to lock so the other function does not get called while its running. In SQL you would do this by creating a shared lock on the first function then a exclusive lock on the second. This allows many threads to have shared access but once a thread has an exclusive lock any shared locks will wait. It sounds like the ReaderWriterLock is what I ...
